DETAILED ACTION

1. Claims 1-16 and 18, as amended on 10/27/2009, are pending in the instant application. Applicant's terminal disclaimer submitted 10/27/2009 is sufficient to overcome the non-statutory double patenting rejections presented in the previous Office action. Accordingly, the instant application is in condition for Allowance.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

In paragraph 0001, after "July 1, 2003" insert --, now US Patent No. 7,028,156,--

Reasons for Allowance

3. **Claims 1-16 and 18** are allowed.

4. Independent **claim 1** recites the limitations "*reading data from a first mirror of a data volume in response to receiving the first read request*", "*reading data from a second mirror of the data volume in response to receiving the first read request*", and "*returning the data read from the first mirror to the computer system*". These limitations are taught by Wilner (US 6,993,677). However, claim 1 further recites the limitation

"storing the data read from the second mirror into a cache memory". These limitations, in combination with the other limitations of claim 1, are not taught or suggested by the prior art of record. The invention disclosed by Wilner teaches comparing the data items read from the first and second mirrors, and returning a matching item if they compare equally. Wilner does not teach storing the data read from the second mirror in a cache memory. If the data read from the first and second mirror do not match, data is read from a third mirror, and if the data read from the third mirror matches the data read from the first or second mirror a matching data is returned. The data that does not match is considered to be in error and is corrected. Accordingly, there would be no reason to store a non-matching data item, and if two of the data items match, there is no reason to return one and cache the other. If all three data items do not match, the system returns an error. If the storage system has decided that the data is in error, there is no reason to return data read from a first mirror and cache data read from a second mirror.

5. **Claims 2-8** depend from claim 1 and are considered allowable for at least the same reasons as claim 1.

6. Independent **claim 9** recites the limitations *"reading data from a first mirror of a data volume in response to receiving a first read request"*, *"reading data from a second mirror of the data volume in response to receiving the first read request"*, *"returning the data read from the first mirror to the computer system"*, and *"storing the data read from the second mirror into a cache memory"*. As discussed *supra*, these limitations, in combination with the other limitations of claim 9, are not taught or suggested by the prior art of record.

7. **Claims 10-16** depend from claim 9 and are considered allowable for at least the same reasons as claim 9.
8. Independent **claim 18** recites the limitations *"reading data from the first mirror in response to receiving a first read request"*, *"reading data from the second mirror of the data volume in response to receiving the first read request"*, *"returning the data read from the first mirror to the computer system"*, and *"storing the data read from the second mirror into a cache memory"*. As discussed *supra*, these limitations, in combination with the other limitations of claim 18, are not taught or suggested by the prior art of record.
